

DataStream

Seven years of DataStream: Left turns, lessons learned and the open (data) road ahead

Carolyn DuBois, Executive Director, Water Program
Lindsay Day, DataStream Program Director
The Gordon Foundation

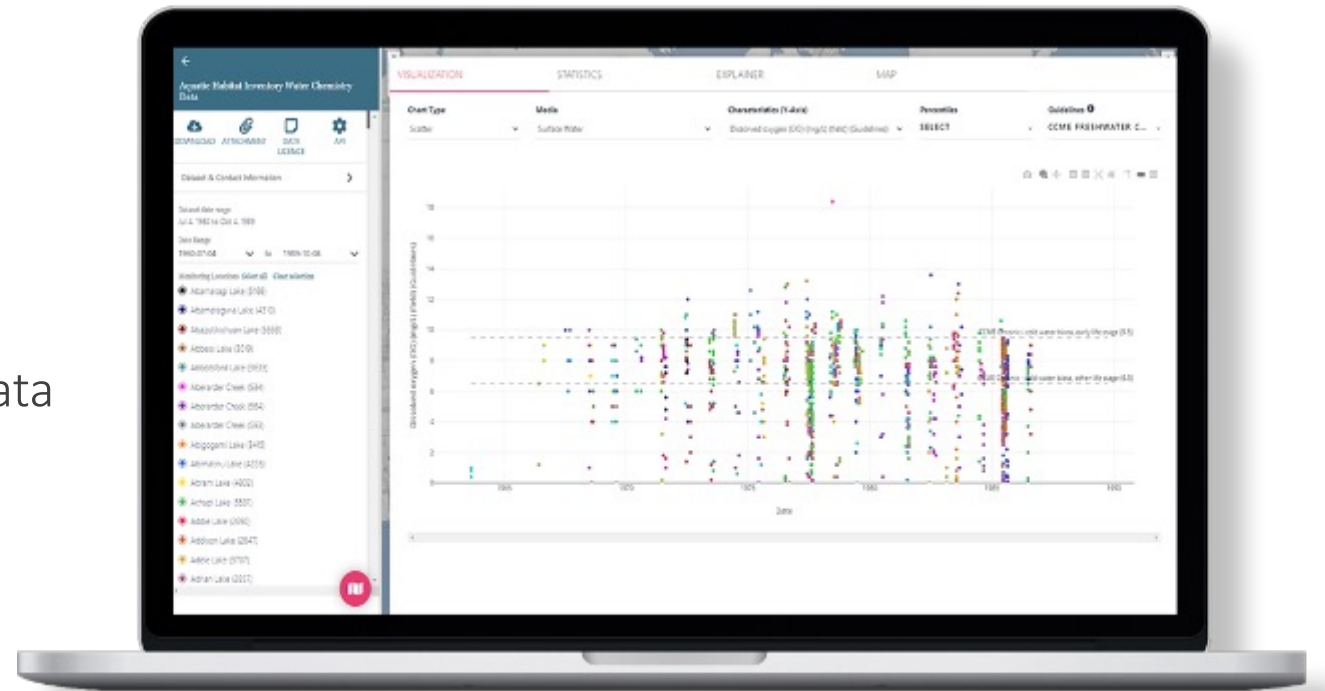

Overview

- DataStream 101
- Lessons from our early years
- Growing pains and gamechangers
- Next steps and the road ahead

DataStream 101

- Open access site for **water quality data**
- Free and open for anyone to use
- Minimizes barriers to accessing/sharing data
- Fosters connections and collaboration
- Committed to **continuous improvement**

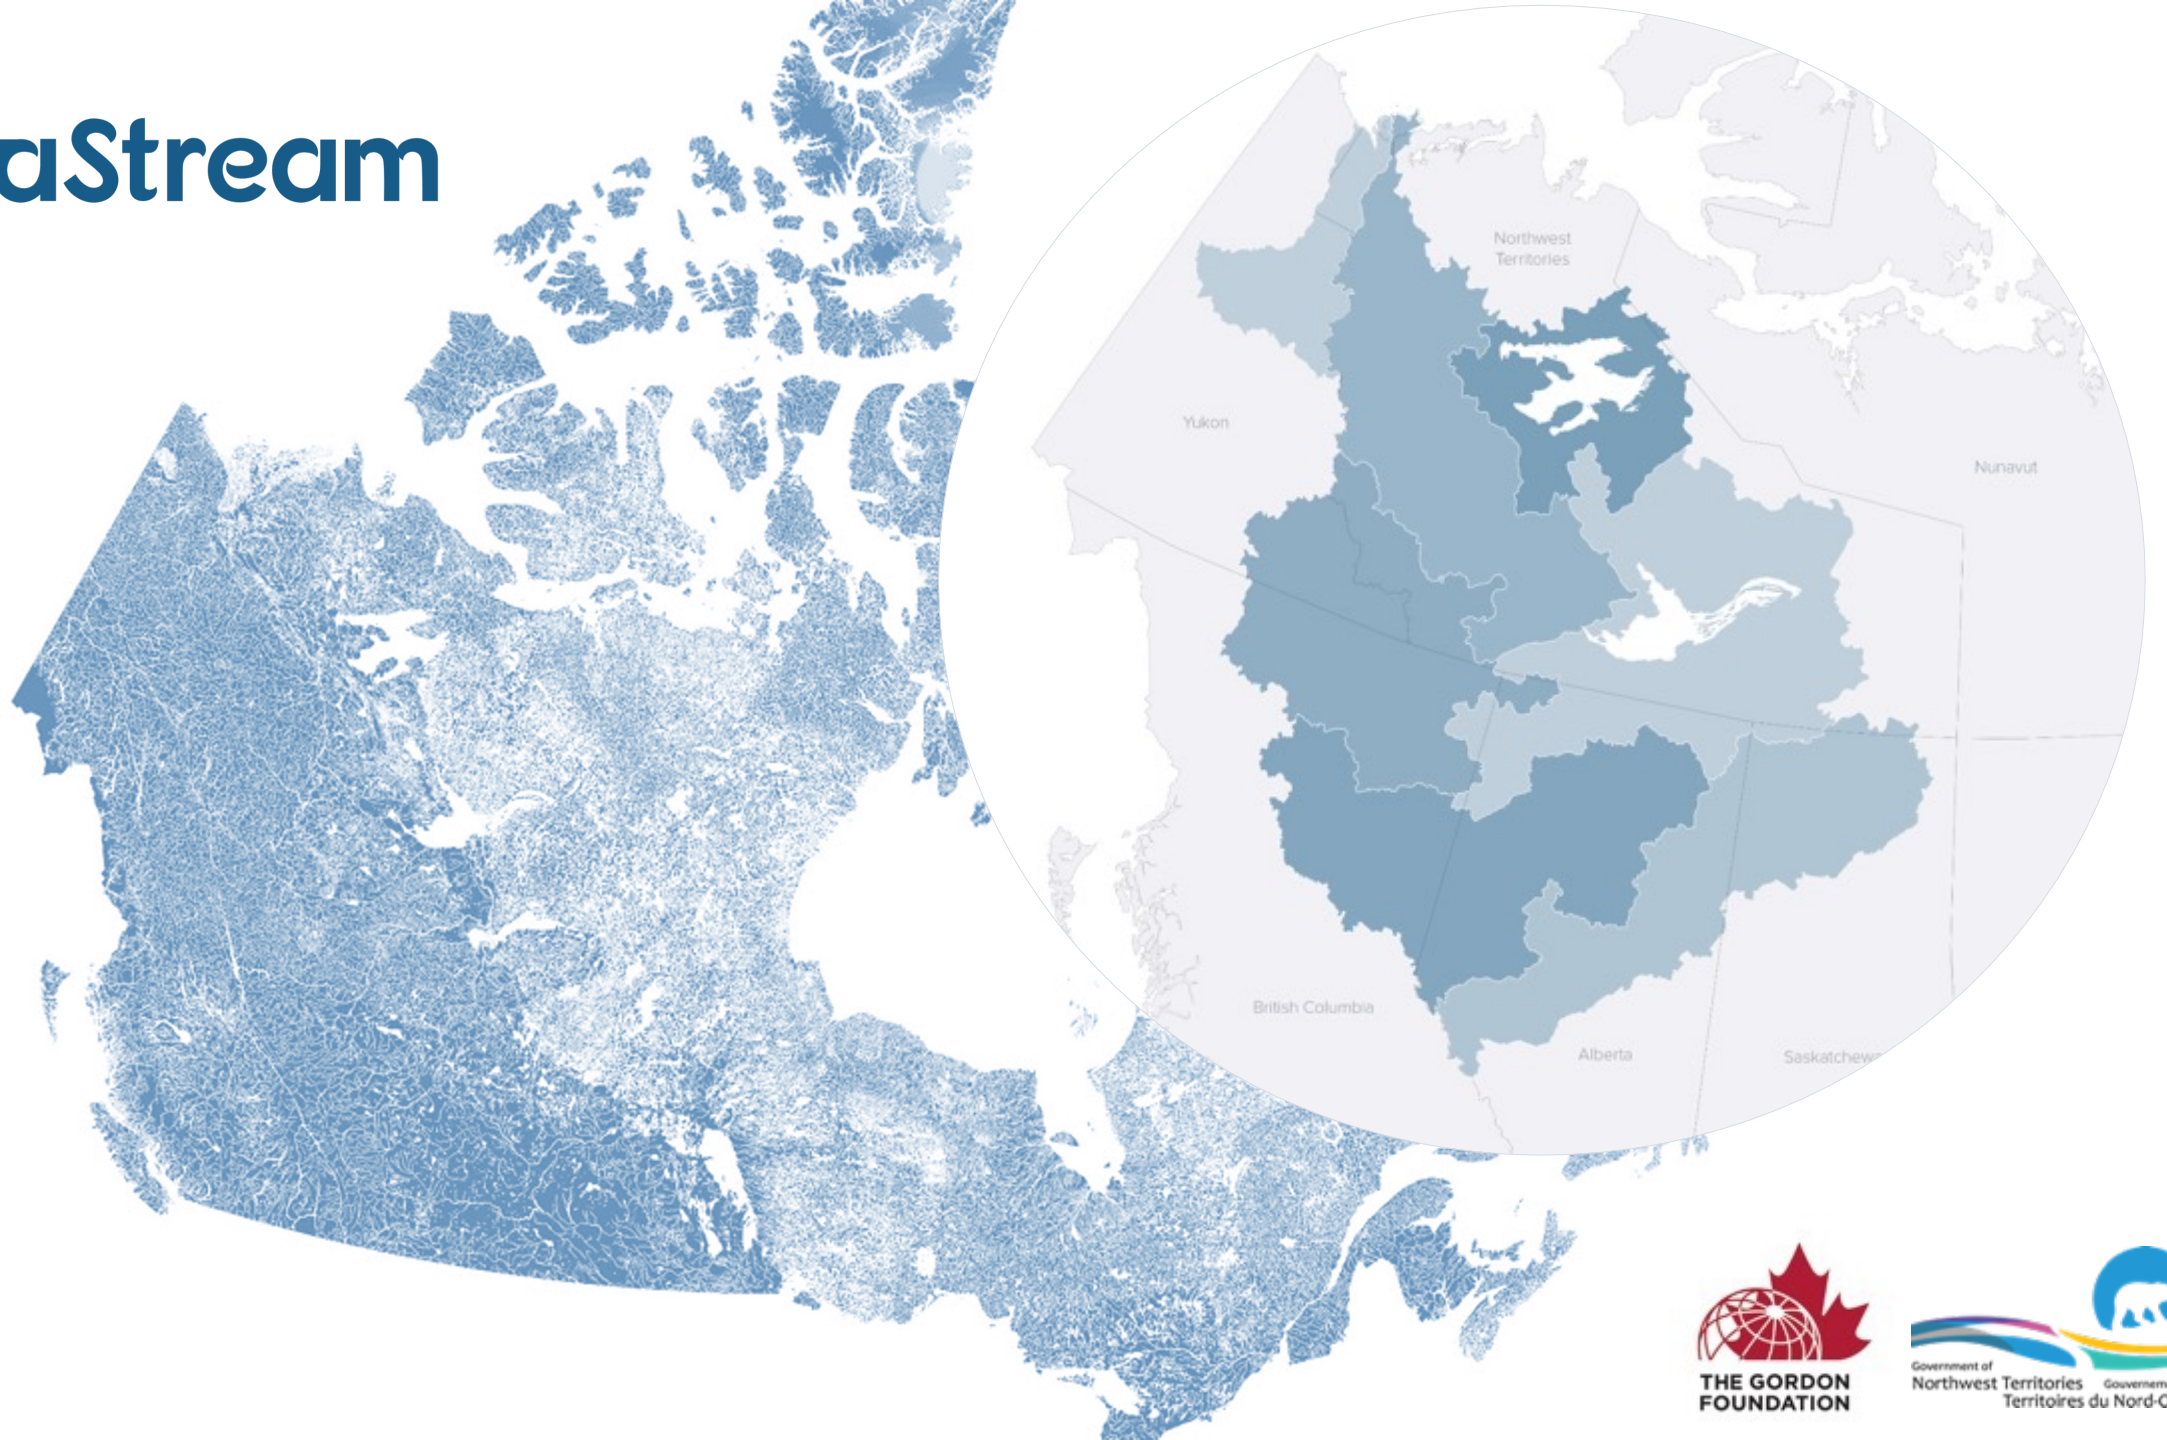

www.DataStream.org

The Early Years

DataStream

Positioning : Where DataStream fits in

Where DataStream fits in

Data Collection

Data is collected by a diversity of organizations across sectors and jurisdictions.

Data Management & Sharing

Open access systems like DataStream provide a place to store, share and compare water monitoring data across jurisdictions.

Open Data To Knowledge

Open data advances scientific knowledge, supports collaboration, and fuels innovation.

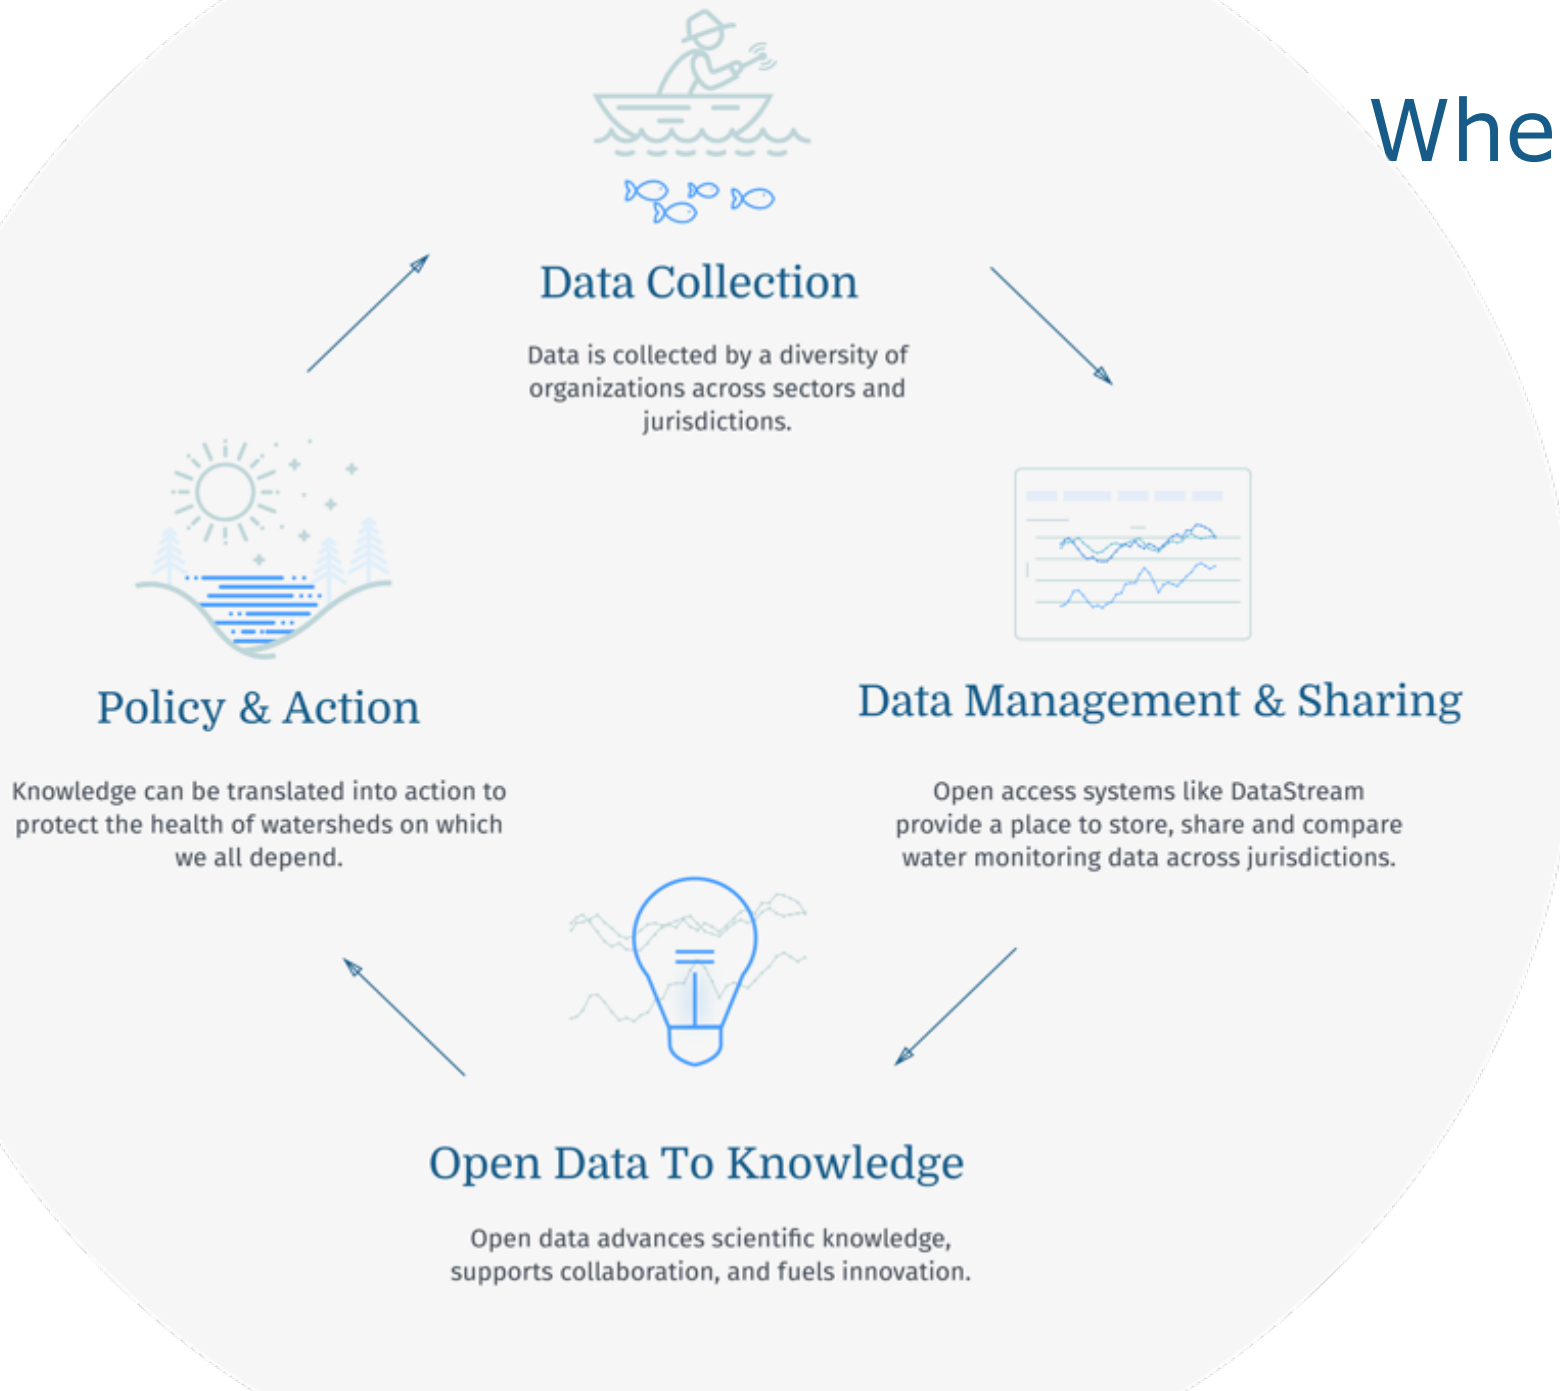

Policy & Action

Knowledge can be translated into action to protect the health of watersheds on which we all depend.

Where DataStream fits in

WE DO

- Provide a place to openly publish water quality data
- Provide support to help organizations format and upload data

WE DO NOT

- Collect, fund or own any water monitoring data
- Analyze data and interpret results
- Fully QA/QC data

Be clear about
what you do and
don't do

Open Data & DataStream

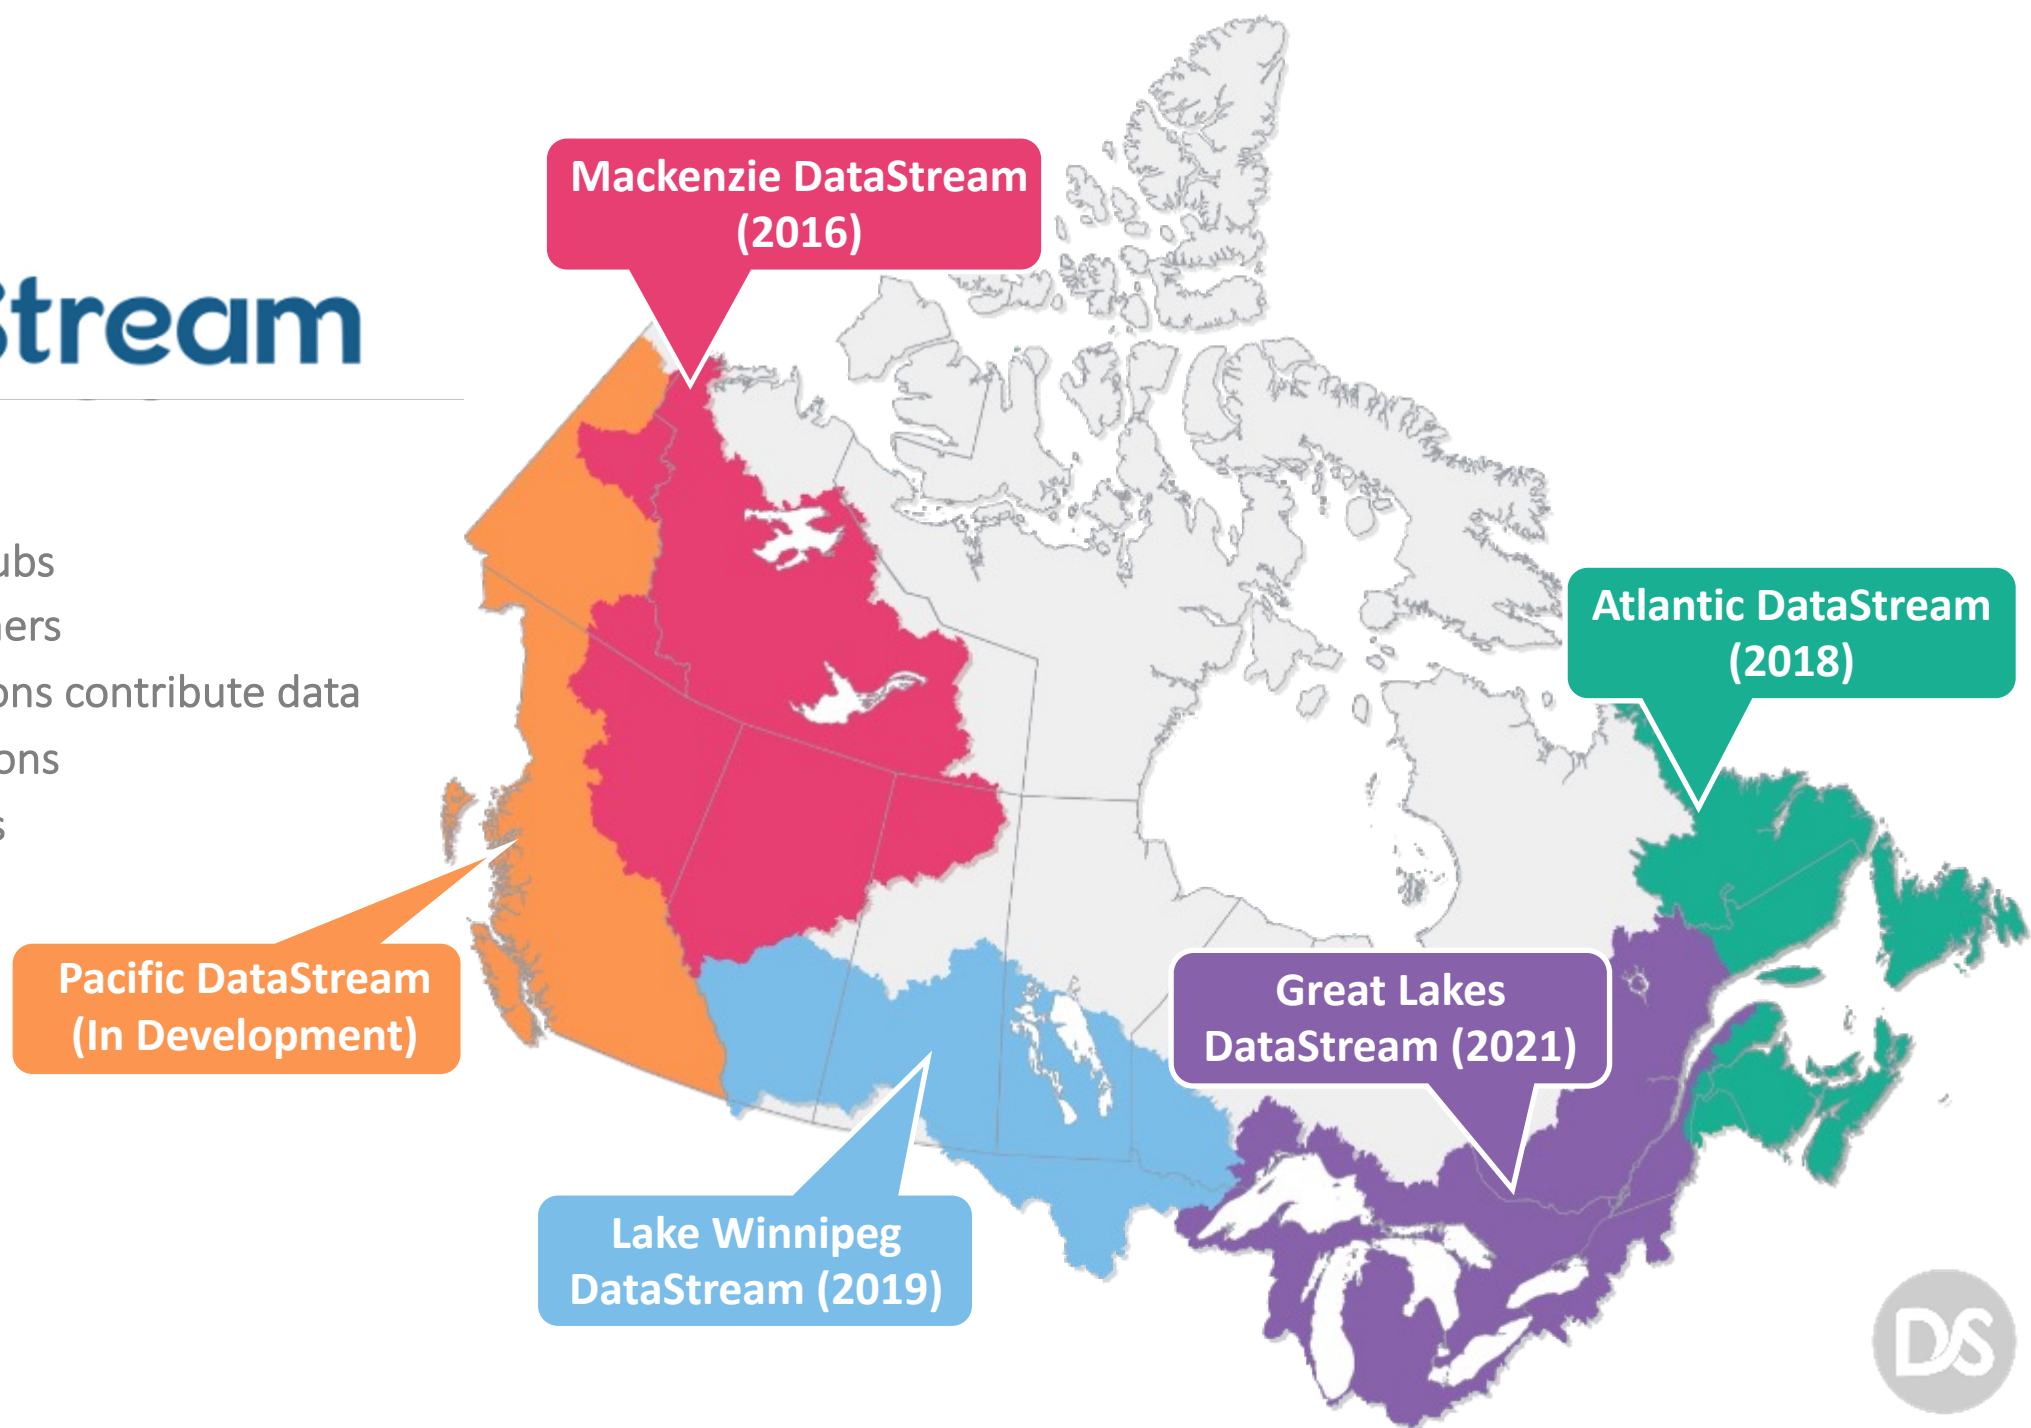

- Free and open for anyone to use
- Access is not tiered or password protected
- All data can be downloaded in structured .csv files (a machine readable, non-proprietary format), or accessed via an API
- All data published under open data licenses that provide clarity around data ownership, attribution and reuse

Open Access is great
(it's also easier)

DataStream

- 4 DataStream hubs
- 3 Regional Partners
- 200+ organizations contribute data
- 31M+ observations
- 47,000 locations

Collaboration is key & takes
time

Who is sharing data on DataStream?

- Watershed organizations
- Academics
- Indigenous governments and orgs
- Provincial/Territorial Governments
- Federal Government

Data contributors maintain ownership of their data

Datasets on DataStream by Contributor Type

By proportion of datasets

Total Datasets: 284

- Academic and other research institutes: 18
- CBM: 145
- Collaboration: 34
- Consultant: 4
- Federal Gov: 28
- Indigenous Gov/Org: 17
- P/T/M Gov: 20
- Watershed Organization: 18

Growth in Data Published on DataStream

Growing pains & Gamechangers

Expectation

vs.

Reality

Standardizing data

Monitoring location

- Site name, ID
- Coordinates
- Reference datum
- Waterbody type

Sample collection

- Sample type (e.g. field, lab, blank)
- Date, time
- Collection equipment
- Activity depth

Parameter/result

- Characteristic name, speciation, sample fraction
- Result value, units
- Analysis method, date, time
- Detection limits

Connecting with other systems

- Community groups
- Researchers
- Watershed organizations

- Open government portals
- Water Rangers
- Water Reporter

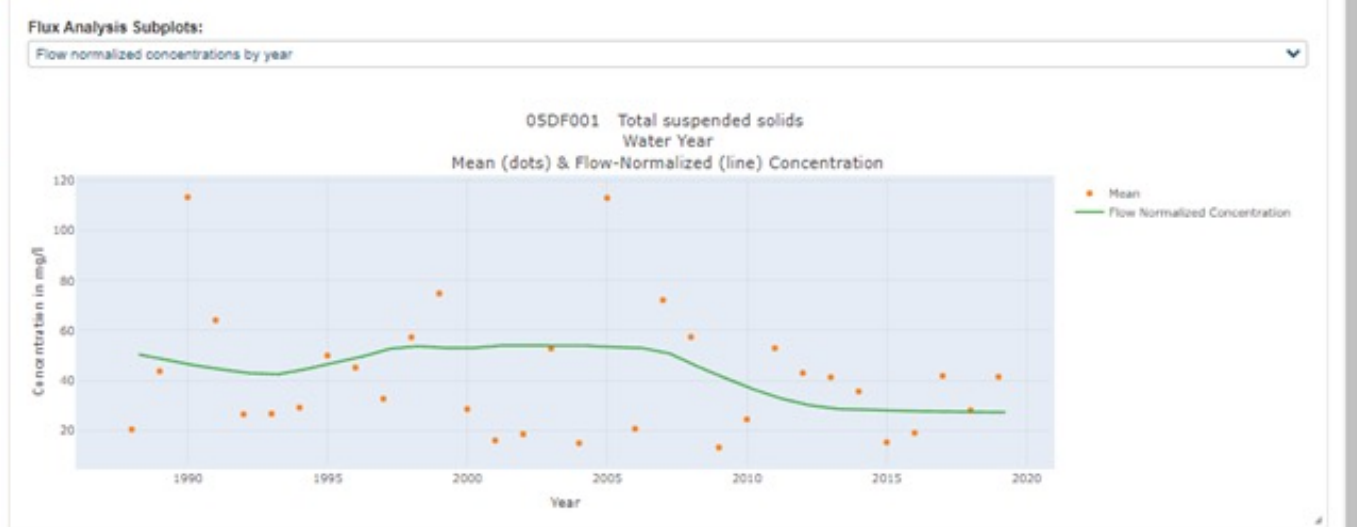

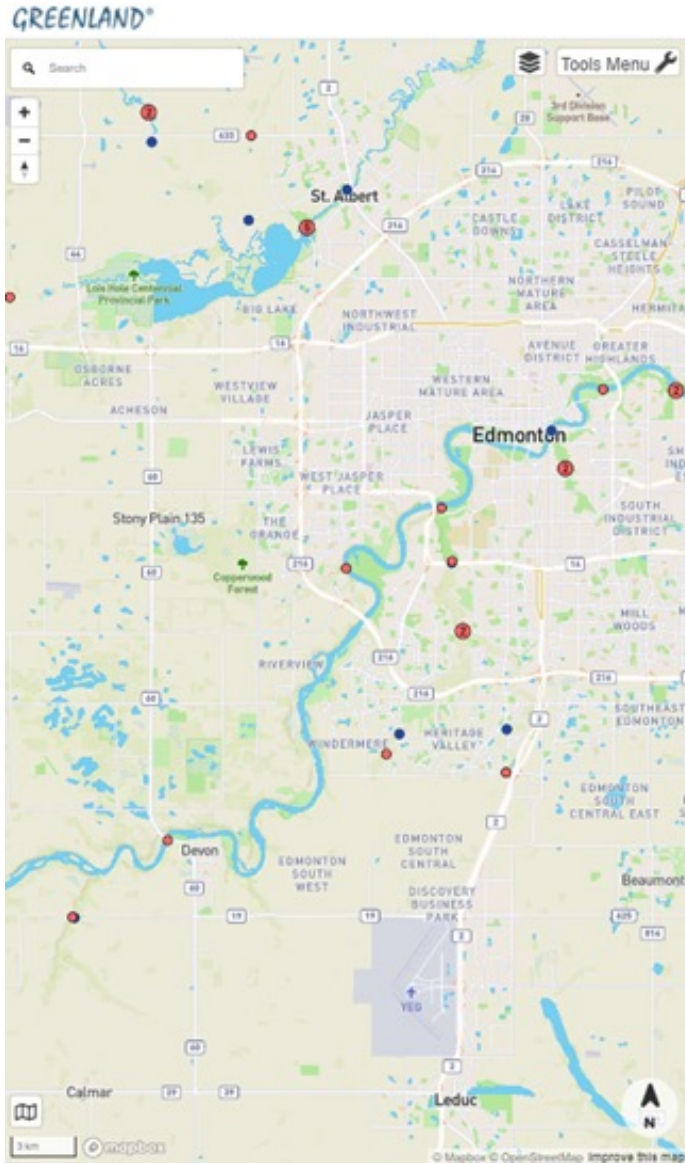

- Communities
- Researchers
- Consultants

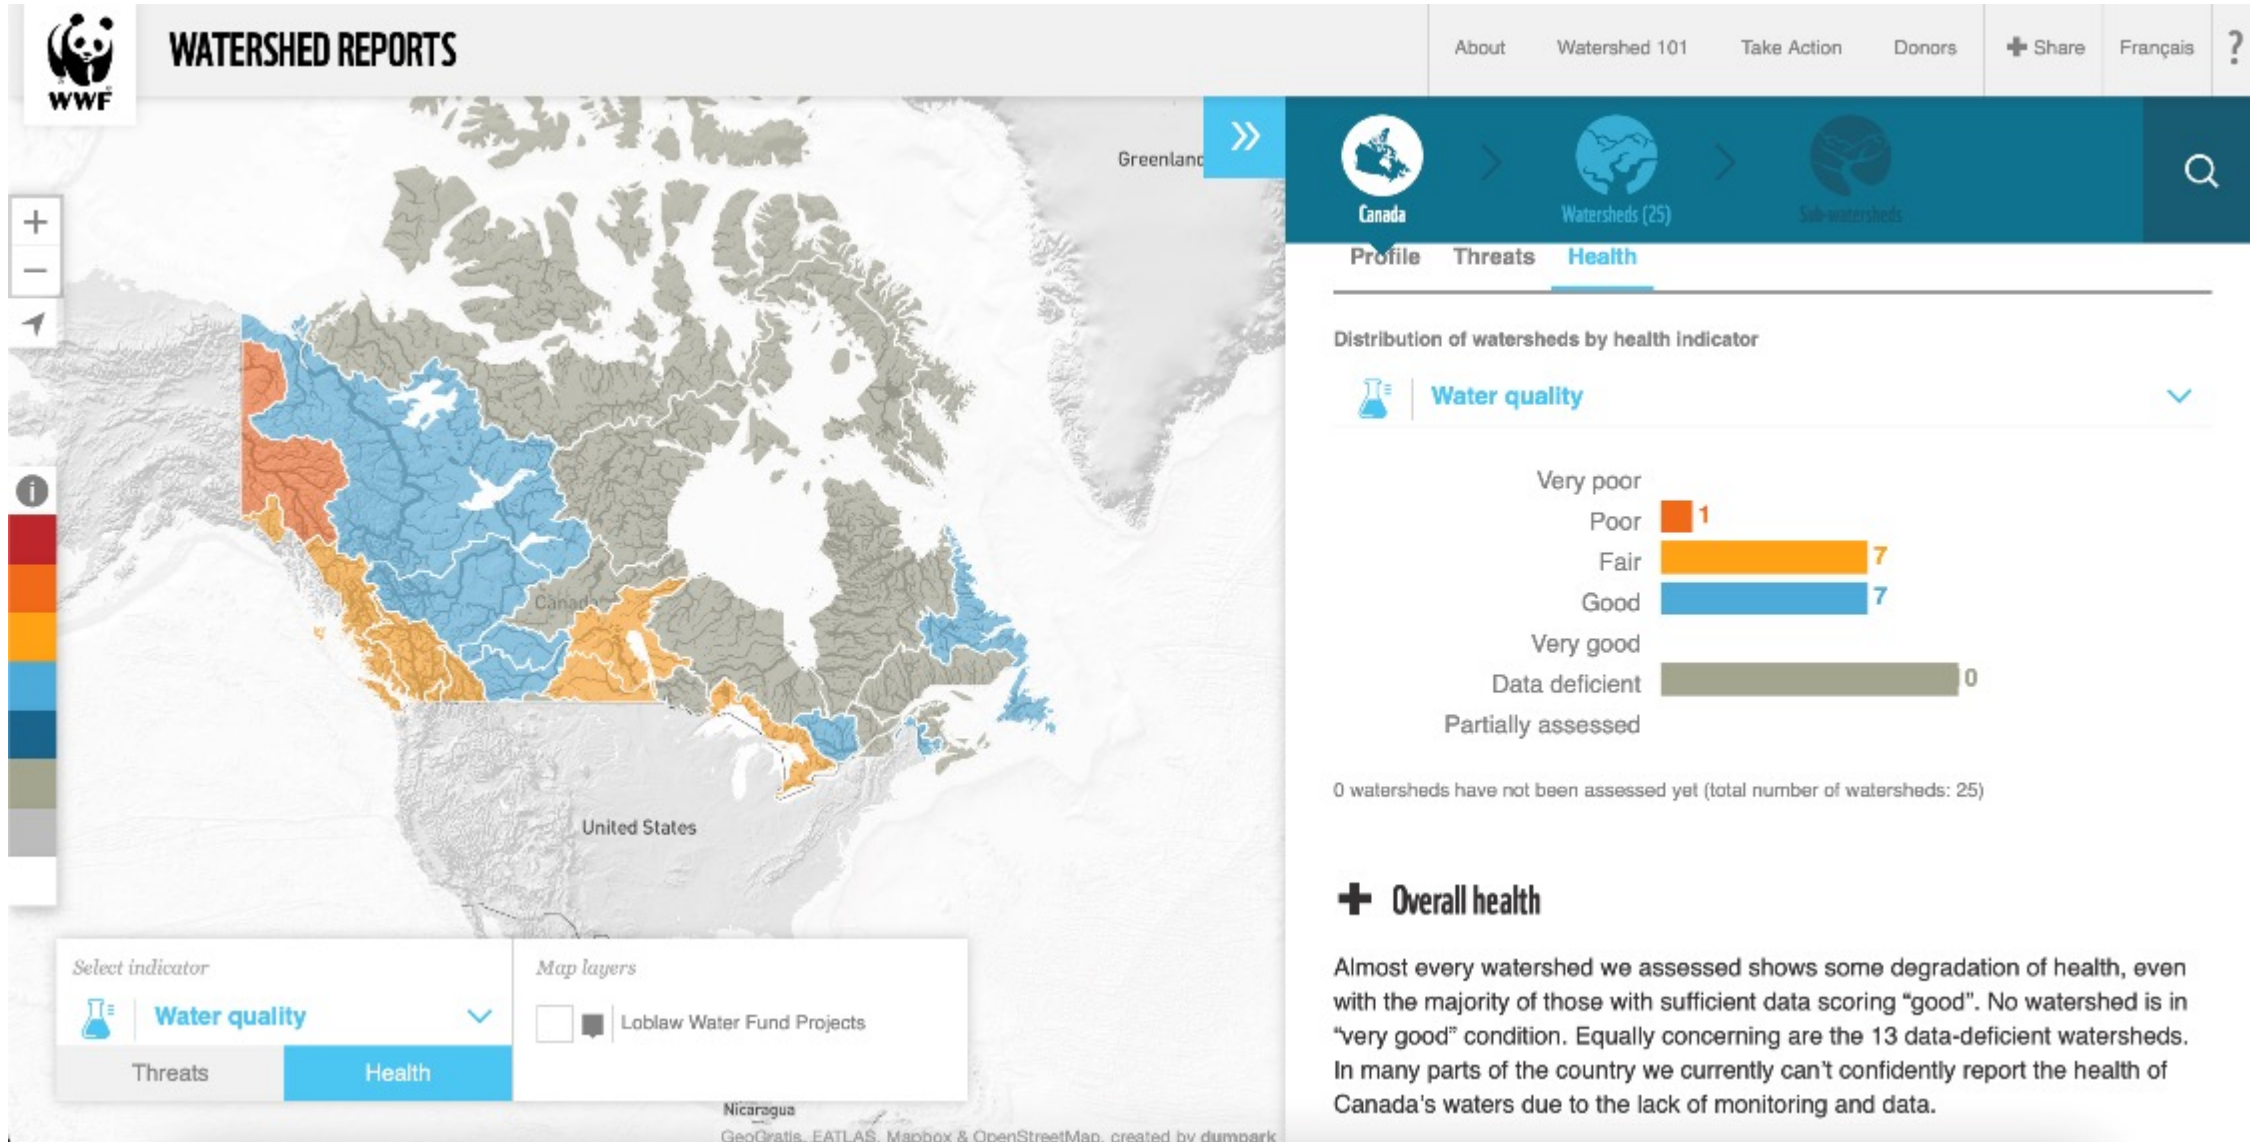

- Data catalogues
- Analysis tools
- Third party applications

The Healthy River Ecosystem Assessment System

WWF Watershed Health Assessment Reports

GROUNDTRUTHING AND FILLING WATER DATA GAPS IN ATLANTIC CANADA

Mapping Atlantic Canada's water quality data

For more info: <https://atlwaternetwork.ca/groundtruthing-and-filling-water-data-gaps-in-atlantic-canada/>

Be clear about
what you do and
don't do

Our Approach:

- Make it easy for people
- Meet organizations where they are at
- Be responsive
- Invest in relationships
- Under promise/ over deliver

The road ahead

What's next?

- Advance CBM & Open Access
- Continued growth
- Groundwater
- Accessibility improvements
- System of systems
- Data Use and story-telling

Thank You!
